The Eden Clinic

The Eden Clinic has two clinics serving the medical needs of women. Our Norman clinic opened in 1997. The Midwest City Clinic opened in 2012. Together, the two clinics' patient visits have increased an average of 25% per year since 2007.

In 2007, the Norman clinic saw a total of 39 women. In 2018, our two clinics served a total of 1540. The need for the services provided by The Eden Clinic are greatly needed and sought out.

We also provide Post-Abortion Care for women who have experienced an abortion, whether it's been a month or 50 years. This program helps them heal both emotionally and spiritually.

Medical services include

- Pregnancy Tests
- Ultrasounds
- Women's wellness exams (PAPs & cancer screening)
- STD testing
- 1st Trimester prenatal care

Non-Medical services include

- Pregnancy Wellness Care (parenting education classes)
- After Abortion Care (for women at any stage post abortion)

2018 (January – December)

- Saved 67 babies from abortions
- Served medical and non-medical needs of more than 1540 patients

2019 (January – November)

- Saved 46 babies from abortion
- Served medical and non-medical needs of more than 1450 patients

UPCOMING EVENT

Pearls of Great Price Annual Fundraiser Gala

Sept 29, 2020

6:30-8:30 pm

NCED (Norman)

We invite your church to host a table at no cost to you or your guests. Each person attending the Gala will be invited to make a donation, which will go directly to the operation cost of The Eden Clinic to help pay for pregnancy tests, ultrasounds, parenting classes, wellness healthcare.

Abortion Statistics Nationally & Statewide

National Abortion Statistics (Annually)

Citation: CDC & NCBI (National Center for Biotechnology Information)

- **Approximately 1,000,000 unborn babies are aborted in America**
- **11.8 abortions per 1,000 women**
- **1970 - 2015, CDC reported nearly 45.7 million legal induced abortions.**

Additional statistics:

--- Approximately 30% of women in Christian churches in America have experienced at least one abortion

--- Women who've experienced one abortion are 6x more likely to commit suicide.

--- Approximately 80% of women who commit suicide have experienced an abortion

--- Abortion

Oklahoma Abortion Statistics (Annually)

Citation: Guttmacher Institute, Women's Health Organization, & CDC

- **Approximately 5,000 unborn babies are aborted in OKLAHOMA**
- **90% of all Oklahoma abortions are medication-induced and aspiration**
- **Abortion is legal up to 18 weeks after conception**
 - Weeks 4-6 after conception** – Positive pregnancy test. Brain, spinal cord, and heart begin to develop-Neural tube that will become the spine closes and the heart is pumping blood

Weeks 7-10 after conception – Nostrils and eye lenses start to form. Fingerprint begins to develop (finger pad development determines loop, whirl, or arches are determined by 10 weeks). Brainwave activity begins and the baby's arms and legs have grown longer. 8-10 of the baby's organs will be formed. Elbows and toes can be seen, and all the internal organs are forming. Breathing movements begin but the baby still gets oxygen through the umbilical cord

Weeks 11-14 after conception – Facial features develop. Baby makes its own blood cells, can form a fist and is developing tooth buds. The nose and lips are completely developed.

Weeks 15-18 after conception (SECOND TRIMESTER) – **Oklahoma abortion law allows abortions through 18 weeks** Baby will suck its thumb and kick and now has fine hair. The intestinal tract is functioning.

*******Oklahoma abortion law allows abortions through 20 weeks in cases of health issues or life endangerment.** Baby can hear you singing and talking and can feel pain. Fingernails are almost fully grown. You can feel your baby move.

Recently in the news: November 2019: OKLAHOMA CITY (AP) — An Oklahoma City abortion clinic filed a lawsuit Friday challenging longstanding state laws that allow only physicians to perform abortions in Oklahoma, marking the sixth time in five years that the state's abortion restrictions have ended up in court.

The lawsuit, which was filed on behalf of the Trust Women clinic, contends that such laws are unconstitutional because they restrict access to abortions without any valid medical basis.

Attorneys for the clinic argue that nurse practitioners are fully capable of providing **both medication-induced and aspiration abortions, which accounted for nearly 90% of the roughly 5,000 abortions performed in Oklahoma last year**, according to state figures.

Interesting Information:

Fingerprints!

The identifying ridge features, however, are not inheritable, making every fingerprint unique. Why are patterns inherited but not the identifying ridge features? The reason lies in the timing of fetal development. Two critical events in the formation of friction ridge skin collide during weeks ten through fifteen. Fetuses develop smooth volar pads which are raised pads on the fingers, palms, and feet. They develop these smooth pads because of swelling mesenchymal tissues which is a precursor of blood vessels and connective tissues. Around week 10, the volar pads stop growing but the hand continues to grow. The pads are absorbed back into the hand where the ridges begin to appear.
